AGROSCI INTRODUCES PREASSEMBLED GREEN WALL SYSTEM FOR OFFICE AND HOME

Just add water and electricity. That's how easy it is to install AgroSci's new preassembled Aerogation™ Green Wall that cleans air 24/7.

AgroSci CEO Chris Pianta said the company is introducing the new product to meet the growing demand for a basic, no-frills, easy-to-install green wall. The 48 inch-wide -by-88 -inch high unit can go anywhere, from a lobby to a living room, from a boardroom to a bar. Just order, unpack and switch on.

AgroSci green walls don't just look great. Thanks to our patented Aerogation™ technology, they employ the most powerful air-cleaning green wall technology on the market. Each preassembled AgroSci green wall is a massive air-purifying machine that cleans a whopping 34,000 cubic feet of air a day.

"Our system enables customers to install a green wall fast without fuss," Pianta said. "The unit comes fully assembled and ready to use. Just fill with water or hook into a plumbing line, plug in and you're good to go. Our patented Aerogation™ system is a sponge for toxins, allergens and impurities. It soaks up contaminated air and purifies it, making interiors healthier and more welcoming."

Aerogation™ takes the natural cleaning power of plants and multiplies it about 200 times. That means our preassembled wall's 60 plants have the air-purifying capacity of about 12,000 houseplants. It's like having a forest pumping purified air in your home, office or business 24/7.

AgroSci offers standard and customized selections of plants for the unit as well as various trim options.

For information and sales, visit the contact page of AgroSci's website.
